Live Ubuntu Remix 12.04 LTS DVD: Linux made easy for the AmigaONE X1000

AmiWest 2013 18th October 2013

A-EON Technology is pleased to announce the official release of the Live Ubuntu Remix 12.04 LTS DVD for the AmigaONE X1000.

At long last there is a simple and easy way to try out Linux on your Next-Generation AmigaONE X1000 without resorting to entering long lines of unintelligible code. You can run Ubuntu Remix in Live mode straight from the DVD, or if you wish, can install it to your hard disk drive alongside your AmigaOS 4 installation with the simple step-by-step installation guide. The Live Ubuntu Remix DVD is the culmination of many months of work by the A-EON Technology Linux Support Team, a small, dedicated group of international AmigaONE X1000 beta testers and owners from the UK, Eire, Germany, Australia & New Zealand. Not only is Ubuntu now easy to setup and use on the AmigaONE X1000, the custom Linux Kernel includes full 3D hardware support for series 4xxx, 5xxx and 6xxx RadeonHD graphics cards. Also included on the DVD are the necessary development tools to enable you to compile your own kernel. Five unique A1-X1000 Linux Desktop backgrounds have been especially created for Ubuntu Remix

DVD along with SuperTuxKart 0.8 AltiVec™, a free 3D kart racing game which has been customised for the AmigaONE X1000. Ubuntu Remix is available to purchase on DVD or as a digital download from the new A-EON Technology AmiSTORE.
